Providing Better Security at a Lower Cost

Fortinet is the pioneer and leading provider of integrated network security solutions that protect your network against today's constantly changing threats. Fortinet is the only company that offers a completely scalable security solution for all sizes of enterprises and service providers. Fortinet has solutions for the world's largest enterprises as well as a small office with 25 users—and every size in between. Unlike providers of point products, Fortinet offers an innovative platform that incorporates all the essential security applications and services required to enable a safe and clean communications environment. Fortinet delivers:

- Better security by providing a comprehensive Unified Threat Management solution
- Higher performance through ASIC-acceleration
- Lower total cost of ownership by integrating best-of-breed security applications in a single device

Fortinet's real-time network protection solutions include a range of high-end chassis based systems, appliances and management and reporting tools. These capabilities allow our customers to cost-effectively protect their critical assets while delivering unparalleled flexibility in deployment and superior ability to meet compliance objectives.

Fortinet is the only unified threat management security solutions provider that owns all of its technology. Fortinet solutions were built from the ground up by Fortinet to integrate multiple levels of security protection—including firewall, antivirus, intrusion prevention, VPN, spyware prevention and antispam—providing customers a way to protect against multi-threats as well as blended threats.

Fortinet delivers better security at a lower cost. We provide network security solutions that address all the most critical needs facing today's technology-based enterprises, no matter the size.

The FortiGate family of security appliances range in deployment sizes to meet network requirements of all sizes and topologies. Additionally, Fortinet delivers a complete line of product extensions that enable network managers to control, monitor, and operate networks simply and powerfully:

- FortiAnalyzer—Logging and reporting appliances that securely aggregate and analyze log data from multiple FortiGate systems
- FortiManager—An integrated management and monitoring tool manages up to 500 FortiGate systems
- FortiReporter—A cost-effective, HTML browser-based analysis, reporting, and monitoring solution
- FortiMail—Enterprise-class antispam and antivirus protection that can be deployed in Transparent Mode, Gateway Mode, or Server Mode

The FortiASIC™ Advantage

The FortiASIC is the foundation of Fortinet's unique technology. FortiASICs use an intelligent, proprietary content scanning engine that accelerates the compute-intensive actions. They also contain acceleration algorithms for encryption so that FortiGate security devices can perform antivirus scanning on VPN tunnels ensuring clean and controlled communications. Coupling our custom ASIC with proprietary network processor acceleration, Fortinet's chassis systems deliver extreme performance and security at a compelling total cost of ownership.

FortiOS™: Developed for Security

Fortinet's FortiOS is with security and performance as top priorities. FortiOS features full routing (BGP, OSPF, RIP), complete logging and auditing for forensic analysis, granular Virtual Security Domain (VDM) support, and a complete command line interface (CLI). No third party software applications are included that might lead to a vulnerability. It is Common Criteria Certified EAL 4+ and ICSA Labs Certified.

FortiGuard™ Distribution Network and Update Manager

The FortiGuard Distribution Network is a global network of redundant high speed database servers that deliver real-time signature updates. The FortiGuard Distribution Network provides real-time 'push/pull' update services for Antivirus, Content Filtering, Antispam, System Software Updates and Intrusion Prevention Services.

Complete End-to-End Solutions ▪ Managing & Analyzing ▪ Secure Messaging ▪ Client Software ▪ FortiGuard Subscription Services ▪ FortiCare Support Services

MANAGING & ANALYZING											
PRODUCT	10/100 Ethernet	10/100/1000 Ethernet	Internal Hard Drive Capacity	High Availability Configurations	Support of all FortiGate Security Functions	Local Signatures & Databases Updates	Role-based Administration	Automated Configuration Deployment	Script Driven Device Configuration	Number of Network Devices	Number of FortiClient Devices
